REPUBLIC OF KAZAKHSTAN**SOUTH KAZAKHSTAN REGION****SHYMKENT****Shymkent**

Is the second largest city in Kazakhstan and the first largest city in South Kazakhstan, one of the largest industrial, commercial and cultural centers of the country. Center of the South-Kazakhstan region.

Climate

- Average annual air temperature - 13.0°C
- Relative humidity of air - 57%
- Average wind speed - 2.2 m/s

REPUBLIC OF KAZAKHSTAN

SOUTH KAZAKHSTAN REGION

SHYMKENT

Today SKMA is one of the most dynamically developing universities of the country which has all necessary resources for ensuring training of highly qualified competitive specialists of pharmaceutical and medical profile. SKMA rapidly moves forward, actively develops international strategic partnership, implements innovative educational technologies. Being the participant of main world trends of education development, SKMA harmonizes its activity in accordance with the Bologna process parameters, requirements of state programs of education and healthcare development and National frame of qualifications. Academy scientists contribute to the development of domestic medical and pharmaceutical science. By the number of scientific directions academy has leading position and the recognized authority in the country and abroad. The university sets new objectives in accordance with demands of the time, thus, currently SKMA has a high public and state recognition . We clearly see our strategic goals

M. Rysbekov
(Rector Of SKMA)

Vegetation

Since ancient times Shymkent has the glory of a "city-garden", a green city. Along the streets stretch rows of slender poplars, branching karagachs, as well as tall oaks. Vegetation of the city is characterized by extreme diversity. Here grow Canadian maple, willow, chestnut, acacia, ailant, thuja, pine, spruce and many others.

Among the garden crops are common cherries, apricots, plums, cherry plums, pomegranate, walnut, quince, various grape varieties, etc. Shrubs are mainly in some regions - blackberries. Among the wild herbs are dandelions, red poppies, cornflowers, shepherd's bag, clover. Artificially along the central streets grow petunias, calendula, rose bushes, tulips, daffodils. In the northern outskirts of the city in 1980, the Dendropark was founded. On the territory of the park of 150 hectares grows about half a million kinds of trees and shrubs, 1360 different species. Among them is a huge number of rare and exotic breeds.

Hydrography

Shymkent is characterized by a high standing of groundwater, which causes the presence of several spring sources in the center of the city. The river Koshkar-ata originates in the center of Shymkent from underground water sources. Along the source and the river bed there is a recreation area, squares are divided, the embankment is arranged. There are specially designated places for swimming. Koshkar-ata has a special cultural and historical significance. Being located on the Great silk road, in ancient times it was of great importance for the marching caravans.

The fact that Koshkar-ata is a source of pure spring water, in the Middle Ages predetermined the development of the city in the immediate vicinity. The river is a place of pilgrimage because of the mausoleum of Koshkar-ata located on its coast. In 2010, it received the status of a specially protected area of local importance. The Badam River originates from the north-western slope of the Karzhantau mountain. The Badam River flows along the southern outskirts of Shymkent. Work is being done to improve the embankment of the river. It is planned to create an infrastructure for a rowing sports complex.

Mountain landscape

In the eastern part of the horizon, the view opens up a fairly long mountainous landscape, which enters the mountain system of the Western Tien Shan. In the southern part of the mountain chain is Mount Kazygurt (height 1768 m, length 20 km). In the direction to the north of the mountain Kazygurt there is a view of the Karzhantau mountain range (height 2823 m, length 90 km). Behind this mountain there is Ugamsk ridge (the highest point is 4299 m, the length is 115 km), which extends further north, coming out from under the overlap of the Karzhantau ridge. For most of the year the peaks are covered with snow.

EDUCATIONAL ACTIVITY

SKMA implements educational activity in 2 groups of specialties at undergraduate and postgraduate levels: public health and social welfare (medicine), engineering science and technologies. Contingent of learners is annually increasing that is due to growing demand in medical and pharmaceutical personnel in the Southern region. The composition of academy includes medical and pharmaceutical faculties, postgraduate education department, department of internship and graduates employment, faculty of specialists training with technical and professional education, faculty of continuous professional development. Highly qualified specialists such as doctors PhD in medical and pharmaceutical sciences, doctors of highest category, honored physicians of Kazakhstan, Academicians of public and national academies of sciences, the owners of the sign “Excellence in public health” work at the departments. Within the realization of multilingualism policy the training is conducted on 3 languages. Staff training is implemented in the close interaction with employers; dual training model is realized. In educational process module study programmes are introduced, active training methods, simulation technologies and standardized patients are widely used in clinical training. An official website of SKMA (www.ukma.kz) comprises information about university activity. Educational portal available for any student includes training-methodical base of academy, e-textbooks, training workshops and exams. Created in academy information network provides technically full functioning of information-educational environment of academy which keeps high degree of information technologies implementation into educational process. By international exchange academy students are trained in National pharmaceutical university (Kharkiv city, Ukraine), I.M.Sechenov First Moscow state medical university (Moscow city, Russia), Bashkir state medical university (Ufa, Russia), Tyumen state medical academy (Tyumen, Russia), St.Petersburg chemical-pharmaceutical academy (St. Petersburg, Russia), University of veterinary and pharmaceutical sciences (Brno, Czech Republic).
